

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Project Title: _____

Project Version: _____ Date: _____

Prepared By: _____

Document Control

Version	Date	Author	Description / Change
1.0	_____	_____	Initial Draft

1. Introduction

- 1.1 Purpose — Describe the purpose of the system and this SRS document.
- 1.2 Scope — Define what the system will and will not cover.
- 1.3 Definitions, Acronyms and Abbreviations — Explain project-specific terms.
- 1.4 References — List standards, documents, APIs, policies and other references.
- 1.5 Document Overview — Briefly explain the structure of this document.

2. Overall Description

- 2.1 Product Perspective — Explain how the system fits into the existing environment.
- 2.2 Product Functions — Summarize the major functions of the system.
- 2.3 User Classes and Characteristics — Identify users, roles and skill levels.
- 2.4 Operating Environment — Specify hardware, OS, browser, database and runtime.
- 2.5 Design and Implementation Constraints — List technical, legal and organizational constraints.
- 2.6 Assumptions and Dependencies — Record assumptions and external dependencies.

3. Functional Requirements

- For each requirement, use a unique ID, description, priority, inputs, processing, outputs and acceptance criteria.
- FR-001: [Requirement description]
- FR-002: [Requirement description]
- FR-003: [Requirement description]

4. Non-Functional Requirements

- 4.1 Performance — Response time, throughput and capacity.
- 4.2 Security — Authentication, authorization, encryption, audit and privacy.
- 4.3 Availability and Reliability — Uptime, backup and recovery expectations.
- 4.4 Usability and Accessibility — User experience and accessibility requirements.
- 4.5 Scalability — Expected growth and scaling requirements.
- 4.6 Maintainability — Logging, monitoring, support and code quality expectations.

5. External Interface Requirements

- 5.1 User Interfaces — Screens, navigation and UI standards.
- 5.2 Hardware Interfaces — Required devices and integrations.
- 5.3 Software Interfaces — APIs, databases, third-party systems and services.
- 5.4 Communication Interfaces — HTTP/HTTPS, email, messaging or other protocols.

6. System Models and Diagrams

- Include Use Case Diagram, Activity Diagram, Sequence Diagram, Class Diagram, ER Diagram, Data Flow Diagram and/or Architecture Diagram as applicable.

7. Data Requirements

- Describe entities, attributes, relationships, validation rules, retention, backup and data privacy requirements.

8. Business Rules

- Document business policies, validations, workflows, calculations and approval rules.

9. Acceptance Criteria

- Define measurable criteria that must be satisfied for each major requirement or feature.

10. Appendices

- Include glossary, sample reports, screen mock-ups, traceability matrix and supporting information.

Requirement Specification Template

Field	Details
Requirement ID	FR/NFR-____
Requirement Name	_____
Description	_____
Priority	High / Medium / Low
Preconditions	_____
Inputs	_____
Processing / Business Logic	_____
Outputs	_____
Exceptions	_____
Acceptance Criteria	_____
Dependencies	_____

Tip: Keep every requirement uniquely numbered and testable. Avoid vague terms such as “fast” or “user-friendly” unless they are measurable.
